The future of the world’s forests depends on the actions we take today.

Market leaders know their choice of wood, paper and packaging products has a direct impact on forests and communities at home and around the world – today and into the future. That’s why so many companies include forest certification in their environmental value statements and procurement policies.

But finding a secure supply of certified products is often a challenge since only 10% of the world’s forests are certified. And while North America accounts for over half of this certified land, a significant amount of land and many manufacturing operations in the United States are not certified.

**SFI Forest Partners® Program**

In 2012, four market leaders – Time Inc., the National Geographic Society, Macmillan Publishers and Pearson – stepped forward and became SFI Founding Forest Partners, investing in the future of our forests by making five-year commitments to increase the source of certified forest products.

SFI Forest Partners are investing in the future of our forests. Their decision to work directly with the diverse SFI community, through the SFI Forest Partners Program, will help achieve the goal of bringing together forest landowners, manufacturers, customers, conservation groups and government agencies across North America to ensure current and future generations can enjoy the many ecosystem services and forest products provided through responsible forestry.

The program will begin with state-based or regional projects in the Southern United States, and will expand across the United States.
Texas
SFI has a strong working presence in Texas with nearly two and a half million acres certified and an active SFI Implementation Committee. And while Texas is growing, demonstrated by positive trends that include BMP compliance and forest certification, there is still lots of opportunity to gear up for current and future marketplace shifts that are increasingly favoring certified products. That’s why the SFI Forest Partners Program is now making it easier for forest products companies and landowners in Texas to certify to the SFI Standards. By providing information, tools and regional expertise for smaller, family-run businesses and medium-sized landowners to develop the appropriate certification system for their situation, SFI Forest Partners Program is helping landowners and mill operators take advantage of becoming certified. With the support of SFI’s Forest Partners, this approach produces a unique and cost effective opportunity to enter certified forest product markets globally.

The SFI Forest Partners Program has three objectives:

Objective 1: Build on experiences of the Maine Pilot Project by continuing to find innovative approaches to group and coordinated certification for smaller and medium-sized mills and forest ownerships, seeking opportunities for collaboration, cost effectiveness and incentives for certification.

Objective 2: Facilitate the uptake of fiber from certified forestlands through the supply chain to buyers of forest products by increasing chain-of-custody certification of small and medium-sized mills, and to influence responsible forestry beyond those lands through fiber sourcing certification.

Objective 3: Grow the certified forestland base by five million acres by the end of 2014, beginning in the Southeast United States, and by 10 million acres by the end of 2017.

“With 26 million people, and 167 million acres in Texas, you get the idea that you can’t do it by yourself. You have to have partnerships. That’s why I was so pleased when [SFI] asked me to come and address you and visit with you, because relationships matter, they matter more than anything. So you have to build partnerships, you have to have credibility and SFI does that with us.”

— Tom Boggus, State Forester and Director, Texas A&M Forest Service Speaking at the SFI Annual Conference in San Antonio, Sept. 17, 2013
