

Writing the Next Chapter

SUSTAINABLE FORESTRY INITIATIVE • 2013 PROGRESS REPORT

SFI-0001

Writing the Next Chapter

A message from the President & CEO

The latest chapter in the unfolding story of responsible forestry is full of good news... we see indicators of success across the board...

Together, we are writing the next chapter to promote sustainable forestry, to improve forestry practices and to encourage responsible purchasing of forest products.

SFI promotes sustainable forest management, improved practices and responsible purchasing of forest products.

Kathy Abusow
President & CEO

The latest chapter in the unfolding story of responsible forestry is full of good news.

As we look back on 2012, we see indicators of success across the board: rising numbers for forest management certification, fiber sourcing certification, chain-of-custody certification, label use, and dollars invested in research, conservation and communities.

This annual report, compiling a year's worth of data reviewed by an independent External Review Panel, is full of positive evidence of contributions made on-the-ground to expand responsible forestry, from more loggers trained to the scope and diversity of our certificate holders and program participants.

Last year also marked the launch of the SFI Forest Partners Program, an innovative initiative through which market leaders work together to promote sustainability across the entire supply chain. Our founding Forest Partners – Time Inc., the National Geographic Society, Macmillan Publishers, and Pearson – deserve enormous credit for their leadership in sustainability, and for their commitment to the future of our forests.

And the next chapter in this story can be even brighter.

It will be brighter thanks to nearly \$1.4 billion in research investments by SFI program participants since 1995, planting seeds that will bear fruit in improved conservation practices for years to come.

It will be brighter thanks to our 35 local and regional SFI Implementation Committees, which help make responsible forestry a reality while increasing awareness of its importance and engaging communities.

It will be brighter as we launch a thorough review of the SFI program to establish our new 2015-2019 SFI Standard, with the transparent involvement of all stakeholders.

Looking ahead, I'm confident that we can sustain the momentum we've created to achieve a better future for North American forests and the people who depend upon them.

Together, we are writing the next chapter to promote sustainable forestry, to improve forestry practices and to encourage responsible purchasing of forest products.

Kathy

A Story of Growth

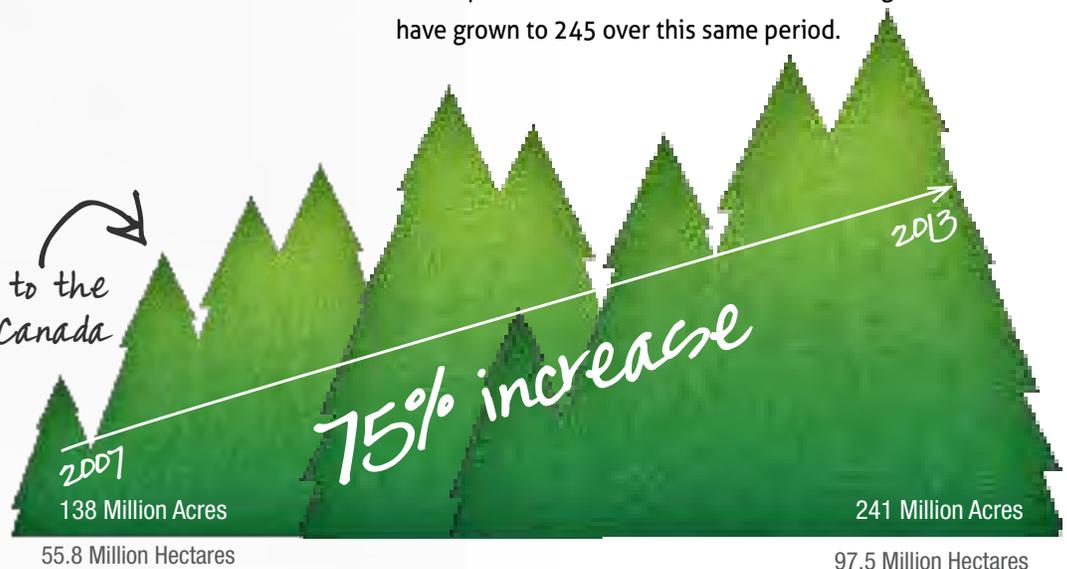

We all have a role today determining the future of our forests for decades to come.

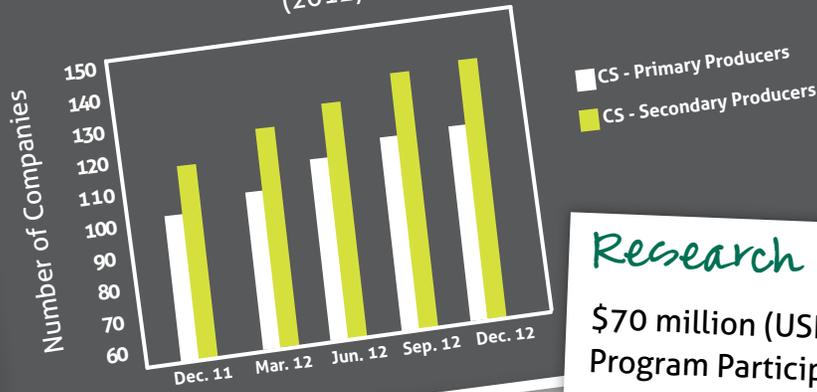

Whether you are a buyer of forest products, a biologist, a small or large landowner, a manufacturer or printer, a conservation group or an architect -- you are making a difference on-the-ground today to ensure healthy forests for tomorrow. Together, we are writing the next chapter for responsibly managed forests in North America.

And it's shaping up to be a great story. The future looks bright for our forests as more landowners manage their lands in a responsible way. Since 2007, forests certified to the SFI Standard® have grown 75 percent in North America, from 138 million acres to 241 million acres as of April 15, 2013. Total chain-of-custody certified locations have grown from about 500 in 2007 to more than 2,500 as of April 15, 2013, and SFI Certified Sourcing certificates have grown to 245 over this same period.

Forests certified to the SFI standard in Canada and the U.S.

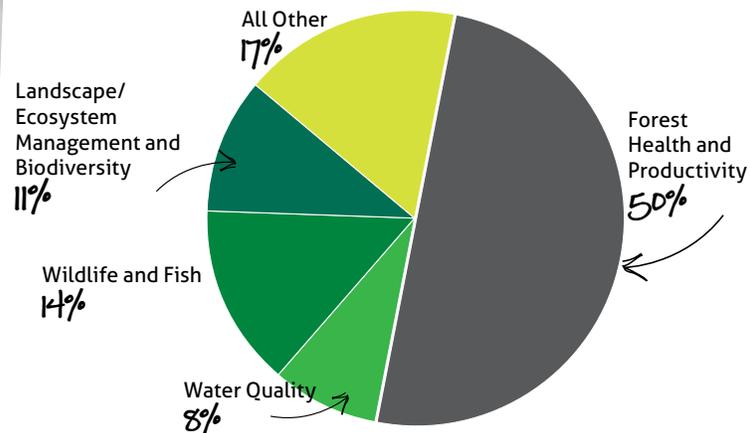

Companies certified to the SFI certified sourcing requirements (2012)

An increase of 17 percent from 205 companies in December 2011 to 240 companies in December 2012.

About SFI Inc.

SFI Inc. is an independent, nonprofit 501(c)3 organization that is solely responsible for maintaining, overseeing and improving the internationally recognized Sustainable Forestry Initiative® (SFI®) program. Across the United States and Canada, land managers and owners have 240 million acres/nearly 100 million hectares of forests certified to the SFI forest management standard. In addition, manufacturers of forest products are promoting responsible procurement through their supply chain by implementing the SFI Standard's unique fiber sourcing requirements

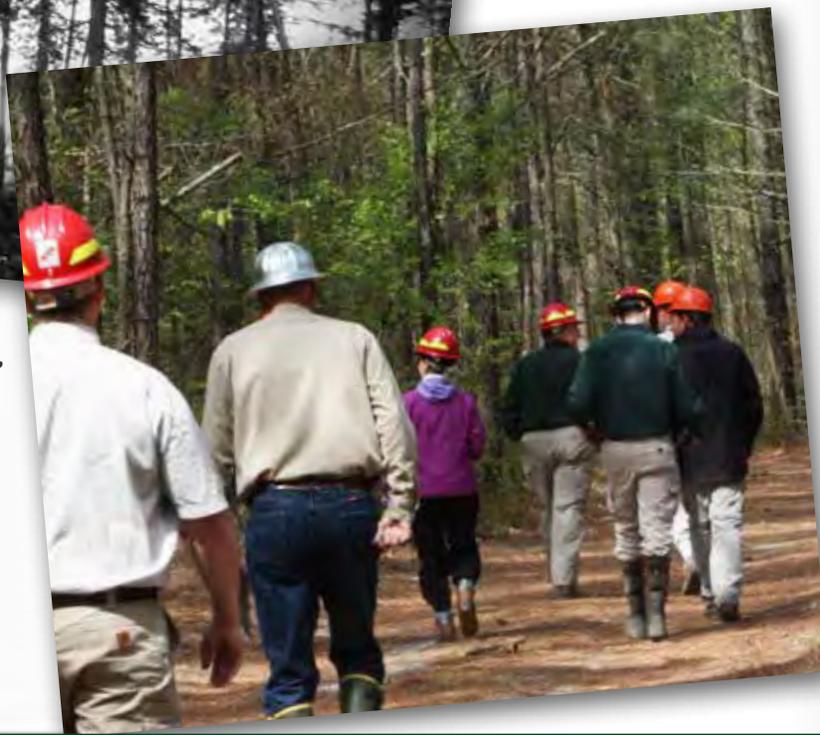

when sourcing from all suppliers' lands. SFI chain-of-custody certification tracks the percentage of fiber from certified forests, certified sourcing and post-consumer recycled content. SFI on-product labels related to certified sourcing and chain-of-custody claims help consumers make responsible purchasing decisions. SFI Inc. is governed by a three-chamber board of directors representing environmental, social and economic sectors equally. Learn more at <http://www.sfiprogram.org/> and <http://www.sfiprogram.org/BuySFI>.

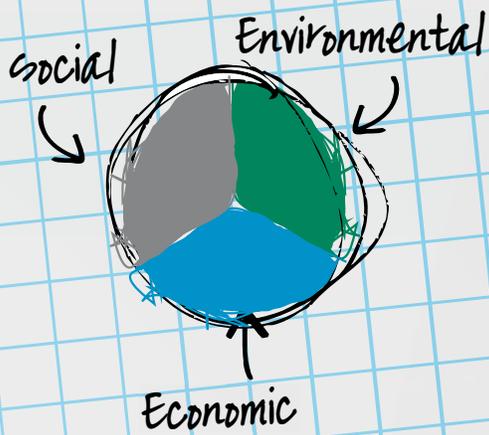

Building on Integrity

Integrity is at the heart of the sustainable Forestry Initiative Program and we build on this for a strong future. It is defined by our commitment to inclusive and transparent governance, a rigorous standard and program activities that make a meaningful difference on the ground.

Group participates in observing an SFI Audit in Salisbury, Maryland.

SFI Program Governance
is balanced to meet the
needs of forests
& communities.

Protecting and maintaining water
resources is one of the rigorous objectives
of the SFI standard.

Our Strength Comes From Many Points of View

The SFI Program's governance has continued to evolve since it became a nonprofit charitable organization a decade ago. SFI's Board is a diverse group of thought leaders who collectively represent the environmental, economic and social interests related to sustainable forestry. SFI representatives listen to and engage with diverse groups in standard development and program activities; because only with collaboration and respect among all forest stakeholders can we successfully ensure our forests thrive for generations to come.

The SFI Standard is developed through an open and inclusive process involving the many different people who know and care about our forests, including public and private landowners, forest sector representatives, aboriginal communities, conservation groups, industry, academia, and government officials. This same diverse group of stakeholders represents the users of the SFI Standard. By sharing ideas, resources and enthusiasm, SFI and its many partners accomplish a lot more in the forest, in communities and in the marketplace.

Read about SFI governance:
www.sfiprogram.org/about-us/sfi-governance/

Chairman, SFI Board

I am honored to serve as Chair of the SFI Board of Directors. From my vantage point as president and CEO of The Conservation Fund, I see a range of conservation groups and strategies in action. SFI is certainly among the most effective.

Forest certification has fundamentally improved the way forests are managed, and no entity is more responsible for that success than SFI. More than 240 million acres in North America are certified to the SFI standard -- a record of success no other single forest certification standard can match and a testament to our shared vision for the future of our forests.

I joined the SFI Board, and now serve as Chair, because SFI is making a real difference on the ground. I'm involved because the vast majority of the world's forests are not yet certified, -- and because there is so much more to do to ensure we do not lose millions of acres of working forests even on this continent.

Working forests provide us with cleaner air to breathe, cleaner water to drink, jobs, forest products, and more.

By working with stakeholders across economic, environmental and social interests, SFI is able to measure tangible progress increasing the sustainability of North America's working forests. Together, we are making sustainable forestry better and bigger than ever before.

Lawrence A. Selzer
President and CEO
The Conservation Fund

Board of Directors (June 2013)

SFI's Board of Directors represents environmental, social and economic interests equally. Board members include public and private landowners, logging representatives, aboriginal communities, conservation groups, industry, academia, and government officials – reflecting the variety of interests in the forestry community.

Integrity

Committed to Improvement

At the core of the SFI program is the SFI 2010-2014 Standard, which sets requirements for landowners and land managers related to responsible forestry. The SFI 2010-2014 Standard also has requirements for manufacturers of forest products to promote responsible sourcing of wood fiber procured for their manufacturing facilities. Part of the SFI Program's next chapter began in June 2013 when SFI launched the open revision process to begin its work on developing the new SFI 2015-2019 Standard. SFI's commitment to continual improvement of its SFI 2010-2014 Standard, its Chain-of-Custody Standard and Label Use requirements involves broad public input through online submissions and regional workshops.

The SFI program review is led by the SFI Board of Directors that provides resources and direction to the SFI Resources Committee, the body tasked with developing the revised standard requirements. The SFI Board has the responsibility for final review and acceptance of the new SFI 2015-2019 standard requirements. In turn, the entire SFI program review process is monitored by the SFI External Review Panel, a distinguished group of independent experts representing conservation, professional, academic and public organizations. The External Review Panel ensures that the SFI standard revision process considers all public input resulting in a rigorous and transparent standard.

Learn more about the SFI standard:
www.sfi-program.org/sfi-standard/

Third-party independent auditors certify forests to the SFI Standard.

Independent Audits Confirm Conformance

Independent third-party audits are the cornerstone of certification to the SFI standard. SFI does not certify organizations as conforming to these standards – that is done by independently accredited certification bodies. All certification bodies that wish to perform certification audits to the SFI Standard must be accredited by ANSI-ASQ National Accreditation Board (ANAB), Standards Council of Canada (SCC) and/or the American National Standards Institute (ANSI).

SFI Standard Review Process Checklist

1. June–Aug. 2013: First 60-day public comment period
2. Fall 2013: Workshops for public comments
3. Mid–Fall 2013: Resources Committee drafts new SFI standard requirements based on comments
4. Fall 2013: SFI External Review Panel reviews handling of public comments
5. Dec. 2013: SFI Board of Directors reviews first draft of new SFI 2015–2019 standard requirements
6. Jan. –Mar. 2014: second 60-day public review period to seek input on SFI 2015–2019 draft.
7. Spring 2014: SFI External Review Panel reviews handling of public comments
8. Fall 2014: SFI Board of Directors approves final 2015–2019 SFI Program requirements
9. Jan. 1, 2015: New SFI 2015–2019 Program requirements are launched.

Family forest landowners own more than one-third of U.S. forestlands.

Sourced Locally, Recognized Globally

Forest certifications to the SFI Standard only take place in Canada and the U.S., supporting domestic forests, conservation, clean water, air and jobs. In addition, through its fiber-sourcing requirements, SFI Program Participants that manufacture forest products in the U.S. and Canada are expected to work through a network of 35 local SFI Implementation Committees to educate owners of non-certified forests and loggers, from whom they procure materials, about responsible logging practices, prompt reforestation, best management practices for water quality and the protection of critical habitats and water bodies.

Privately-owned woodlands are the largest segment of America's forests. About 26 million acres/10.5 million hectares of these lands are managed by family forest landowners certified to the American Tree Farm System® (ATFS) standard which SFI Inc. recognizes. The ATFS is a program of the American Forest Foundation. Private forest landowners develop a management plan based on strict environmental standards, pass an inspection by an ATFS inspecting forester and are also sampled through third-party audits.

The Program for the Endorsement of Forest Certification's (PEFC) rigorous sustainable forest management criteria are founded on internationally recognized criteria and indicators developed by government agencies around the world. Each national forest certification system undergoes rigorous third-party assessment against PEFC's unique Sustainability Benchmarks to ensure consistency with international requirements.

Publicly-owned forests are the largest segment of Canada's forests, representing over 90% of forestland in Canada. Many certifications in Canada are to the CSA Standard, which SFI recognizes.

In turn, the SFI Standard, the ATFS Standard and the CSA Standard are recognized by the PEFC, the world's largest forest certification umbrella organization with more than 30 endorsed forest certification programs. SFI's endorsement by PEFC allows the SFI program to support a global network of forestry standards while providing access to SFI certified forest content in markets around the world.

\$164,393
 2012 financial contributions by SFI Implementation Committees to American Forest Foundation programs locally (including ATFS and Project Learning Tree)

Investing in Conservation

Since 1995, SFI program participants have invested nearly

\$1.4 billion

in research on forestry issues

SFI was founded to manage the SFI Standard, but it has become much more than a Standard. We recognize that improving sustainable forestry requires an investment in research and the collaboration of many partners.

SFI conservation grants include projects related to wildlife habitat, water quality, and conserving biodiversity.

SFI Program Participants Invest in Research

Our future depends on incorporating the best current research. We understand the value of investing in research to improve best practices and inform revisions to the SFI Standard. Since 1995, SFI Program Participants have invested \$1.4 billion in forest-related research. We know this because every year we survey our Program Participants to learn how they are investing in research and what types of conservation partnerships and projects they have supported.

In 2012, SFI Program Participants invested \$70 million alone and were involved in over 250 conservation-based projects with over 600 partner organizations including conservation agencies, state or provincial agencies, academic institutions, indigenous communities, family forest owners and other forest products companies.

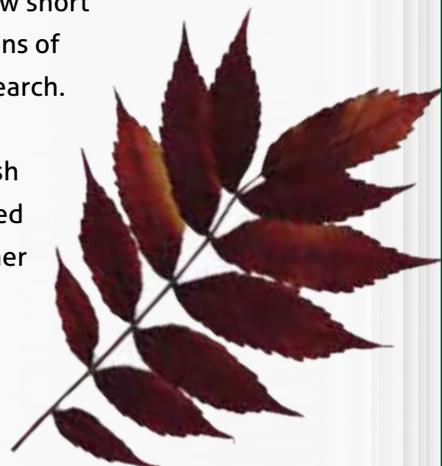

As an example, in the south Puget sound Region, SFI Program Participant Washington Dept. of Natural Resources, working with the Muckleshoot Indian Tribe Wildlife Program, joined together on a project to remove scotch broom in order to improve habitat and enhance winter big game forage.

SFI funded American Bird Conservancy to foster better habitats and reverse declines in the populations of birds of conservation concern.

SFI Invests in Conservation Grants

Part of writing the next chapter began in 2010 when SFI launched the Conservation and Community Partnerships Grant Program. The grant program builds on SFI Program Participant's long-standing commitment to research that advances sustainable forestry practices and conservation science. With a \$400,000 investment in 2010, the SFI Conservation Grant program has grown to over \$4.8 million in just a few short years thanks to the contributions of partners, in funding and in research. Collaborative projects to date have supported clean water, fish and wildlife habitat, endangered species management, landowner and community outreach and education, and responsible global forest supply chains in the U.S. and Canada.

Conservation

2012 Conservation Grants spotlight

Improving Water Quality, State by State

All state forestry agencies have methods in place to protect water from pollution, like sediment associated with forestry activities. The SFI Standard requires working forests to meet or exceed state best practices. By harnessing the power of good data, this study is designed to improve and protect our nation's water quality by collecting, analyzing and sharing the impact of best practices, state by state.

WORLD
RESOURCES
INSTITUTE

New Online Tool Cuts Through Illegal Logging

Illegal logging is a critical international issue, with major impacts on biodiversity, local communities and carbon emissions. Now there's an open-access website that helps stop this \$10 to \$15 billion a year criminal enterprise. Launched in June 2012, the World Resources Institute's "Forest Legality Risk Information Tool" helps stakeholders across the supply chain — importers, traders, investors and customers — secure forest products from legal sources. The site enables informed and responsible purchasing at risk.forestlegality.org.

Since 2010, SFI has awarded more than
\$1.32 million
in conservation grants.

Leveraging partner contributions,
\$4.8 million
has been invested in these
research grants.

Home Sweet Home for Birds in the Ponderosa Pines

The American Bird Conservancy is working to reverse declines in the populations of Lewis's Woodpecker, Flammulated Owl, White-headed Woodpecker and Williamson's Sapsucker. These birds of conservation concern, as listed by the U.S. Fish and Wildlife Service, are a barometer of healthy ponderosa pine forests.

Working in forests across the Pacific Northwest, ABC is promoting forest management practices that help foster healthy bird habitats, including thinning, understory management and creating snags.

2013 Conservation Grant Awards

National Audubon Society

Working with partners, seven Audubon state programs will collaborate to make bird science materials more accessible for forest managers and will create, pilot and refine outreach workshops using recommendations from key forestry industry partners throughout the Atlantic Flyway of the Eastern U.S.

University of Saskatchewan

This project will aid in sustainable forest management efforts in the boreal forest by providing new science-based knowledge to ensure habitat supply and function can be maintained for caribou and grizzly bear in Alberta.

UNIVERSITY OF SASKATCHEWAN

The Nature Conservancy Canada

This project will support bat conservation efforts in the West Kootenay region, specifically as it pertains to understanding seasonal changes in use of habitat, and securing of critical roosting habitat prior to the arrival of White Nose Syndrome, a deadly fungal disease of bats.

Pinchot Institute for Conservation

Convening key stakeholders in the US and Europe to examine sustainability criteria in the international trade in forest biomass for energy will increase the knowledge of European pellet purchasers and European policymakers with regard to US forestry practices and sustainability programs, including forest certification. The project will also contribute to the SFI Standard revision process and the SFI program's alignment with EU requirements.

PINCHOT INSTITUTE FOR CONSERVATION

U.S. Endowment for Forestry and Communities

Forested watersheds provide drinking water for two of every three Americans; protecting them is essential. Generating revenue for forest landowners for the water services their land provides is a sustainable approach for protecting and improving working forests. This project focuses on generating water utility support for watershed conservation on lands certified to SFI.

Tk'emlups te Secwepemc

The Tk'emlups te Secwepemc First Nations people of southern British Columbia will work with their elders to describe cultural heritage resources in the Kamloops Timber Supply Area and deliver training sessions to youth within 7 different First Nations. This transfer of knowledge will assist the First Nations and forest managers in BC in protecting culturally important resource sites and supporting implementation of the SFI standard over the long-term.

Supporting Community

SFA actively engages in local communities to make a difference on the ground for our forests and the people who depend on them.

7,014
resource & logging professionals
trained in 2012
(142,849 since 1995)*

*The total may include individuals who have completed training programs more than once.

Grassroots Network on the Ground

In 1995, the first SFI Implementation Committee (SIC) was established to strengthen the SFI Program's link to local communities. Today, 35 SFI Implementation Committees representing 43 states/provinces respond to local needs and issues across the United States and Canada. This unique grassroots network involves a diverse group of local forest stakeholders, including private landowners, independent loggers, forestry professionals, local government agency officials, academics, scientists, and conservationists. Their multi-interest and active presence on the ground is resulting in significant contributions to individual communities, through activities such as training loggers and sponsoring outreach to landowners on responsible forest management.

This approach to training and implementation of responsible forestry practices is unique to the SFI program – no other forest certification program in the world has this level of grassroots support to promote responsible forestry, best management practices for water quality and training.

Logger training and education is a core priority for all SFI Implementation Committees.

SFI Implementation Committees

SICs are an Integral part of the SFI Program by facilitating or managing at a state, provincial, or regional level the programs and alliances which support the growth of sustainable forest management through the SFI program.

The Core Priorities for all SICs are:

1. Logger Training and Education
2. Responding to Inconsistent Practices Inquiries
3. Landowner outreach
4. Increasing SFI program Recognition
5. Annual Reporting
6. Protecting SFI Program Integrity

92% of raw material used by SFI program participants was delivered by trained logging professionals

SFI Implementation Committees Rock

Number of SFI Implementation Committees	35
Number of SFI Implementation Committee Members	958
2012 SIC contributions to support local activities such as logger training and outreach to family forest owners	\$2.75 million USD
- Total contributions since 1995	\$62.95 million USD

Community

2013 SFI Community Grants

In 2013, SFI Inc. awarded seven community grants in amounts up to \$5,000 to support youth education in forestry, green building and advancing management and awareness of culturally important land. Past community grants have supported the:

- **Lauderdale County, Habitat for Humanity (Mississippi)** to build a home using SFI-certified products and certified to the ANSI National Green Building standard.
- **National 4-H Forestry Invitational (West Virginia)** showing youth how forests grow, the role forests play in their lives, and how forests are managed to provide multiple benefits.

- **Outreach to underserved landowners in Alabama and Mississippi:** through the National Network of Forest Practitioners.

- **Idaho Forest Foundation:** teacher tour on SFI certified land, utilizing Project Learning Tree curriculum.

- **Georgia SFI Implementation Committee:** Habitat for Humanity project utilizing wood certified to SFI and developing a video to tell the story of a tree's life cycle.

- **Minnesota SFI Implementation Committee:** Developing an interactive education display and video for the Minnesota Historical Society's Forest History Center, to promote the SFI program and responsible forest management to youth.

- **Florida SFI Implementation Committee:** teaching university students about responsible forest management through Project Learning Tree (PLT).

- **Auburn University's Rural Studio:** Lion's Park Boy Scout Hut build, using wood products certified to SFI.

- **Philmont Scout Ranch:** Visiting Foresters Program. Teaching Boy Scouts about responsible forest management on SFI certified forestland.

40%

of SIC members represent community groups, including conservation organizations, academia, loggers, local forest companies and public agencies

Georgia Forestry Community Habitat for Humanity Build

A New Generation in Georgia

The Jones family's tree-planting – featuring a new white oak tree that is an offspring of Athens, Georgia's venerable "Tree That Owns Itself" – sprung from a partnership between the Georgia SFI Implementation Committee and the Macon Area Habitat for Humanity. While working with other partners to build a home for the Jones family using sustainably harvested wood products, the Georgia SIC was able to highlight the sustainable cycle from harvest to mill to home building to reforestation. This ambitious project highlighted Georgia's abundant and well-managed forests while helping a family in the community.

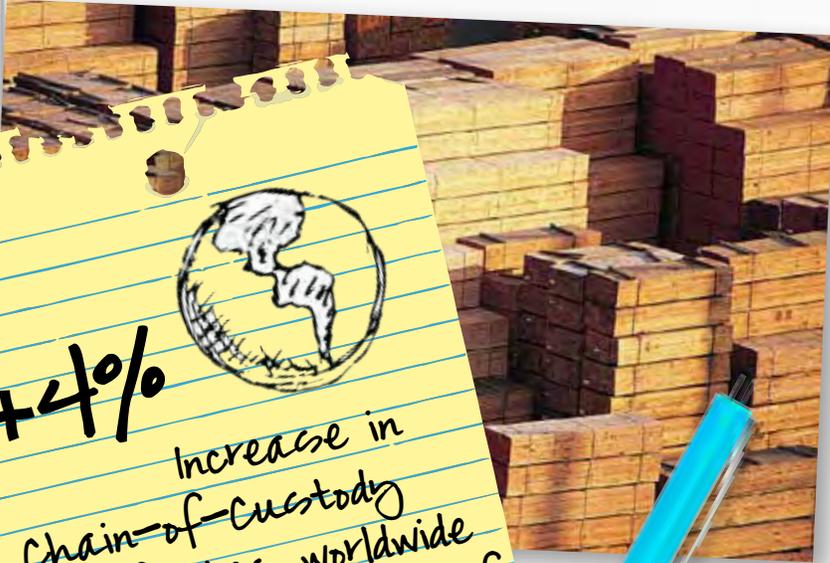

see the full video at:
[youtube.com/user/SFIProgram](https://www.youtube.com/user/SFIProgram)

The Jones family planted an oak in their new yard (Macon, Georgia).

Responsible Purchasing & Outreach

+4%

Increase in
Chain-of-Custody
certificates worldwide
in 2012, for a total of

1,069

Consumers, corporate leaders and governments alike demonstrate they care about the responsible use of natural resources through their responsible purchasing decisions and actions.

Look for the SFI label on any wood, paper and packaging product you purchase.

Look for the **PrintApply** app that shows SFI paper product information (available for iPhone and Droid). Look for SFI in the Certified Papers section!

Demand for SFI Labels is Growing

The SFI label is a symbol of responsible forestry to help customers and consumers identify the fiber is from responsibly managed forests and/or recycled content. From lumber to books to paper packaging, you can find the SFI on-product label on a wide range of items you buy for the home, office and everyday life.

SFI Inc. advises all SFI Program Participants and Label Users to be accurate and consistent with applicable law and requirements for SFI logo

use. Program Participants and Label Users are encouraged to consult the U.S. Federal Trade Commission's guidelines on environmental claims in product advertising and communication and the guidelines on environmental labeling and advertising issued by the Fair Business Practices Branch of Industry Canada's Competition Bureau, and to seek additional information and direction from national accreditation bodies, national standards bodies and national, state and provincial consumer protection and competition laws.

6,000+
SFI label

approval requests on wood, paper and packaging products in 2012.

SFI label use approvals have increased from 50 approvals in 2007 to 6,000 approvals in 2012.

Outreach

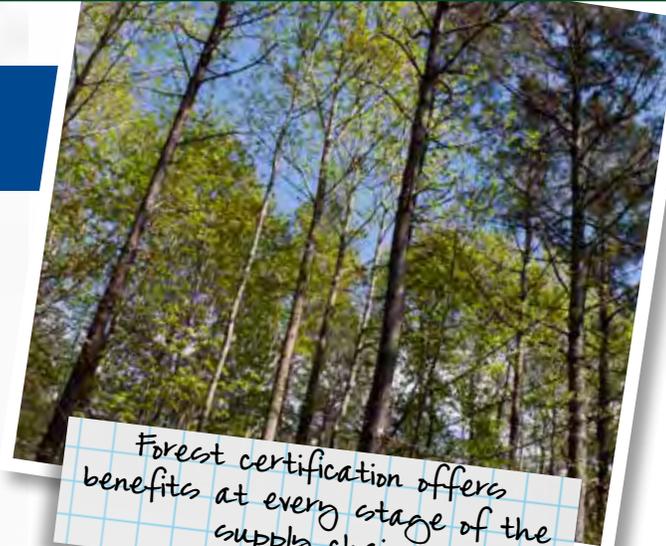

Improving Management on Uncertified Lands

The SFI program stands apart from other forest certification programs by addressing the fact that all forest landowners play a critical role in the long-term health and sustainability of forests — and that 90 percent of the world's forests are not certified.

It does this through sourcing objectives requiring that all SFI Program Participants must show that the raw material in their supply chain comes from responsibly managed forestland, whether the forests are certified or not. The SFI Fiber Sourcing requirements include: the use of best management practices (BMPs) for water quality, promoting reforestation, education and outreach on protecting endangered species, and promoting the use of trained loggers and qualified resource professionals.

OF THE WORLD'S
FORESTS ARE
CERTIFIED

Forest certification offers benefits at every stage of the supply chain.

SFI Forest Partners Lead the Way

Market leaders know their choice of wood, paper and packaging products has a direct impact on forests and communities at home and around the world – today and into the future. That's why so many companies include forest certification in their environmental value statements and procurement policies.

Forest Partners

In 2012, four market leaders – Time Inc., the National Geographic Society, Macmillan Publishers and Pearson – stepped forward and became SFI Founding Forest Partners, investing in the future of our forests by making five-year commitments to increase the source of certified forest products. The program works to involve more landowners, manufacturers, distributors, customers, conservation groups and government agencies across the supply-chain with the goal of certifying 5 million acres (2 million hectares) of forests to the SFI standard by 2014 and 5 million more acres (2 million hectares) by 2017, starting in the U.S. South. By collaborating on shared objectives and linking market leaders directly to stakeholder groups, SFI and our Forest Partners are working together to strengthen forest practices and procurement through certification.

In 2012, these market leaders stepped forward as founding SFI Forest Partners.

Time Inc.

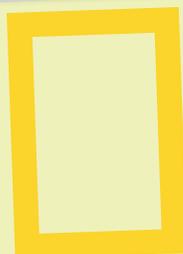

MACMILLAN

PEARSON

SFI Forest Partner
Spotlight

The National Geographic Society is one of the world's largest nonprofit scientific and educational organizations.

NATIONAL GEOGRAPHIC

"The National Geographic Society is very pleased to be able to participate in SFI's Forest Partners Program. We believe strongly that we, as publishers, have a role to play in encouraging responsible forestry practices. The goal of certifying 10 million acres of forest in the United States by the end of 2017 represents the perfect opportunity for us to do so. By participating in forest certification we hope to send a clear signal that we are a responsible corporate citizen."

— Hans Wegner, Chief Sustainability Officer,
National Geographic Society

Outreach

State governments move toward inclusivity

The future of our forests depends on the action of our leaders. The movement toward an inclusive approach to forest certification in green building continued to gain steam in 2012 and early 2013. Governors Nathan Deal of Georgia, Phil Bryant of Mississippi and Robert Bentley of Alabama, joined Governor Paul LePage of Maine in blocking the use of green building rating systems that do not give equal credit to all forest certification standards. Similarly, Governor John Kitzhaber of Oregon signed an executive order to promote wood products grown and manufactured in Oregon. These actions add to the drumbeat of pressure on USGBC to explicitly recognize SFI and ATFS as it prepares to roll out their revised LEED rating tools, LEED v.4.

These actions by elected officials signal growing recognition of the value and contributions of SFI certification towards the health of our nation's forests and towards the strength of our nation's economy.

SFI Green Building and CEU:
www.sfioprogram.org/green-building

White House
Easter Egg Roll

For the fifth straight year, the paperboard used for the official gift box is certified to the SFI standard and the hardwood eggs are certified to the Forest Stewardship Council (FSC), a fittingly inclusive approach to forest certification.

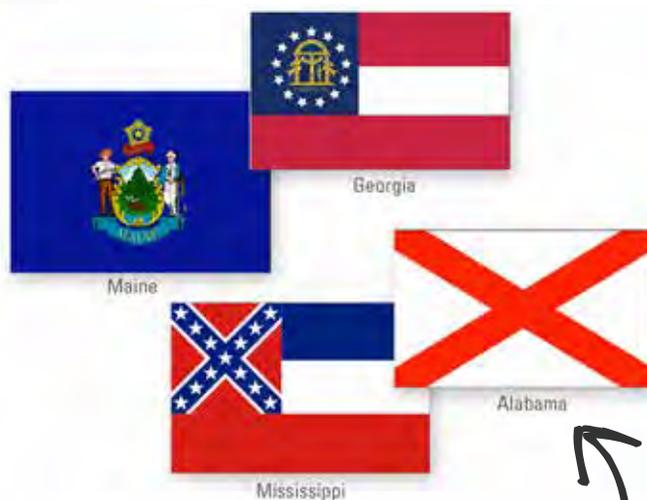

The platform built for the 57th Presidential Inauguration featured wood certified to the SFI Standard and provided by Sierra Pacific Industries.

State Leadership

"Favoring only one forest certification standard in the 'green building' rating system places forest landowners and the forest products industry at a competitive disadvantage, which severely limits the marketability of much of the wood grown in Alabama and the forest products manufactured in the State."

—Alabama Governor Robert Bentley
Executive Order, signed April 11, 2013

Elected officials in several states, including Alabama, Georgia, Maine, and Mississippi, have taken direct action through Governor executive orders or legislation to prohibit the use of a green building rating system that does not give equal credit to SFI, FSC, and ATFS.

SFI launched a new microsite: www.sfiprogram.org/buysfi to inform & help customers make responsible buying decisions.

The SFI program has on-product labels to help consumers identify exactly what they are buying.

Product Labels Support Purchasing Decisions

Any company that is certified to meet the Standard's fiber sourcing requirements can use SFI's Certified Sourcing Label. The SFI certified sourcing label and claim do not make claims about certified forest content. Certified sourcing can include fiber sourced from a company that conforms with objectives 8-20 of Section 2 - SFI 2010-2014 Standard's fiber sourcing requirements, from pre- or post-consumer recycled content, or from a certified forest, and fiber sourced from non-controversial sources.

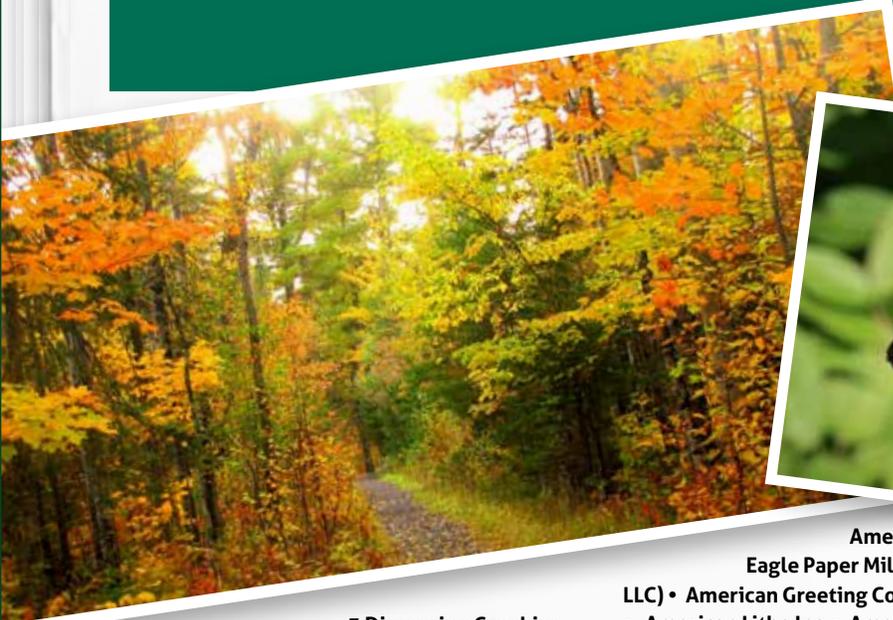

The SFI program also has three certified chain-of-custody labels, each indicating that a chain of custody has been third-party certified. SFI chain-of-custody is a standard that tracks percentages of certified forest content, certified sourcing material, and post-consumer recycled content.

Any organization that processes or trades SFI-certified forest products is eligible to seek SFI chain-of-custody certification. This includes manufacturers of forest products, paper merchants, converters, wood dealers, wood yards, wholesalers, brokers and printers. To achieve SFI chain-of-custody certification, the organization must have processes in place to track the source of its raw materials, such as inventory control, employee training, reporting and invoicing, and meet the requirements in the SFI Chain-of-Custody Standard. Chain of custody is a means to assure the marketplace that the claims organizations make are credible and transparent. The chain-of-custody labels vary depending on whether a percentage based or a credit based method was used to calculate certified forest content flows.

SFI Funding

SFI is primarily supported financially by SFI Program Participants who use the program's forest management and fiber sourcing standards. These SFI Program Participants are listed on the SFI website (www.sfiprogram.org/files/pdf/SFIProgramParticipants.pdf) and include forest product and paper companies, conservation organizations, state and local public agencies, tribal and aboriginal lands, and universities. In 2012, SFI Program Participants provided 93 percent of the funding for SFI, and the remaining seven percent came from annual conference revenue, various services agreements, investment income and other miscellaneous sources. Certified SFI Program Participants are audited by independent certification bodies accredited by ANSI, ANAB and/or the SCC. SFI has no role in determining whether a certificate gets granted.

SFI Implementation Committees: On the Ground, Across North America

-  SFI Implementation Committee
-  No SFI Implementation Committee

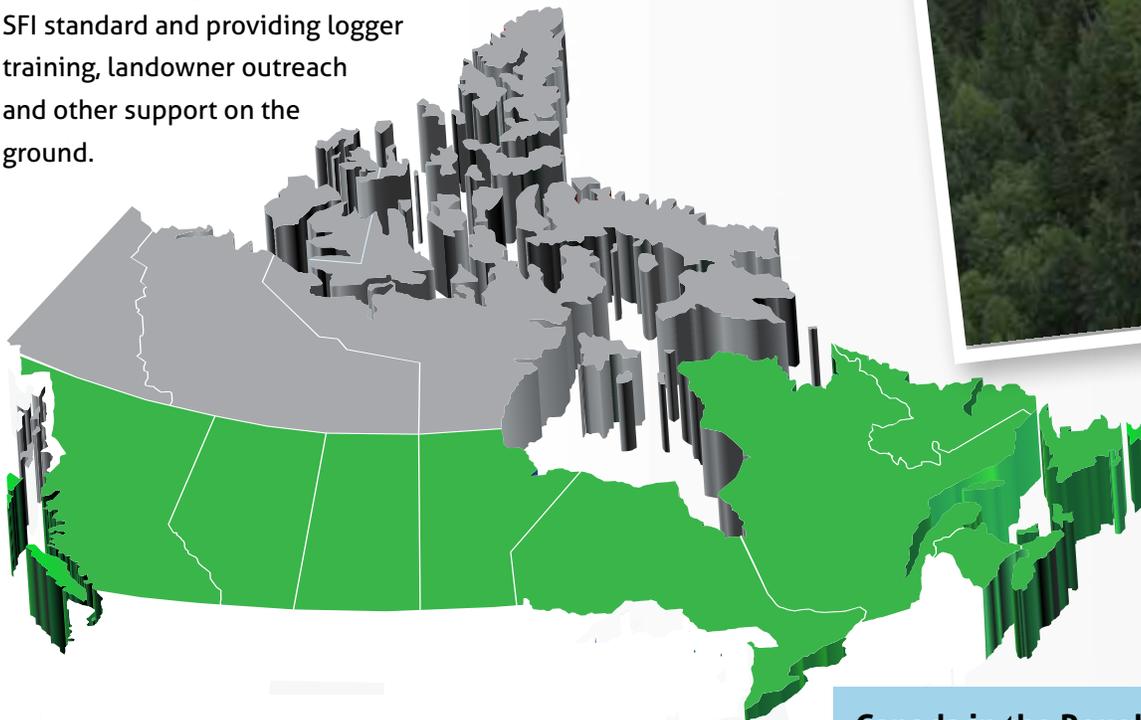

2012 SFI Implementation Committee Achievement Award Winner

The Virginia SFI Implementation Committee earned the 14th Annual SIC Achievement Award in 2012 for harnessing the enthusiasm and knowledge of its many partners to show the environmental benefits of building with certified wood.

"Thanks to our diverse membership, we've been able to raise awareness in the state's green building community about the great value of forest certification. We want architects, builders and engineers to see for themselves how certification improves forest management, and to understand they are supporting local communities and workers by choosing SFI-certified forest products."

— 2012 Committee Chair James Fretz of International Paper Company

Today, the future of our forests is being supported by the work of 35 regional, state and/or provincial SFI Implementation Committees representing 43 states/provinces across North America. These are primarily volunteers who engage in local community work, monitoring compliance to the SFI standard and providing logger training, landowner outreach and other support on the ground.

View the episode:
www.youtube.com/user/SFIProgram

Canada in the Rough

SFI and the Canadian SICs were featured on an exclusive conservation, wildlife, and forestry education episode of the three-time award winning television program Canada in the Rough on "Episode 3: Up Close with Roosevelt Elk."

The episode spotlighted a unique Roosevelt Elk recovery program. Host Keith Beasley and SFI's Danny Karch talked about why the SFI forest certification standard is so vital to wildlife habitat and also how SFI helps promote responsible forest management.

Balanced Oversight from All Parts of the Forest Community

External Review Panel Members

The SFI External Review Panel is a distinguished group of independent experts representing conservation, professional, academic and public organizations. The ERP conducts an independent review of the SFI program for both objectivity and credibility and to ensure the annual SFI Progress Report fairly states the status of SFI program implementation. The volunteer panel provides external oversight through its independent review of the current SFI program and standard revision process while seeking steady improvements in responsible forestry practices.

A Message from the External Review Panel

The External Review Panel has reviewed the background data that underlie the preparation of this Annual Progress Report, and finds the report to be an accurate and fair representation of the SFI program's achievements in the past year. If anything, the Report understates SFI's progress, as it avoids burdening the reader with the tremendous amount of data that are involved. That information, however, was essential in giving the Panel an "inside" look at the progress reported to be able to assure the public that the Report is a credible presentation of the achievements toward sustainable forestry in North America during the past year.

The SFI program seeks to maintain and build on the program's integrity, and the Panel found evidence that this goal is being effectively pursued.

Included in the evidence were:

- The impact of the web-based progress reporting system on data accuracy and integrity;
- The growth and continued efforts to improve logger training programs within the regional, provincial, and state SFI Implementation Committees (SICs);

- The increase in SFI-certified lands that speaks to landowner satisfaction with the program as well as the organization's pursuit of the goal to increase sustainably managed forests across North America;
- The reasoned, factual and calm communications that the program's leaders develop in response to the continuing attacks on the program by some campaign groups;
- The continued growth of SFI Chain-of-Custody certificates and the increasing array of public officials and others encouraging the appropriate recognition of certified wood products in the green building systems;
- The sound programs run by the SICs that allow the public to question forest practices that seem inconsistent with the SFI Standard, and the capacity of the SICs to assure that any such situations that involve SFI Program Participants are resolved quickly and fairly;

- The investments that SFI Program Participants make to support forestry research as well as community and conservation programs continue to grow and set the SFI program apart as a strong contributor to the continual improvement of sustainable forestry practice;
- The creation of the Forest Partners Program, with its focus on expanding the practice of sustainable forestry on small and medium-sized forest ownerships that might otherwise be unable to economically participate; and,
- The open and transparent process that has been established for the review and updating of the SFI Standard for 2015-2019.

In addition to this evidence, the SFI program demands continual improvement. In seeking that improvement, the Panel looks forward to the upcoming SFI Standards Review and urges Program Participants, interested organizations, and the general public to take advantage of the opportunity to contribute suggestions for improving both the Standard and the SFI program in general. All contributions are welcomed for inclusion in this important review. As we conduct our oversight of the fairness and transparency of the review process, we will ensure that your comments receive careful and thoughtful consideration.
